

MuskyDoge

Hello we would like to apologize for delaying the Whitepaper, after that we will make some changes in the fees to insure the quality and transparency of the project and give a USECASE TO MUSKYDOGE.
Read the whitepaper for better understanding.

MuskyDoge was created as a MEME and after reaching 200K MC the team behind MuskyDoge decided to give a USECASE to the token.

Initial supply 420 Q

Liquidity BURNED/
Burned 2Q 1st August 2021

We are a community focused project with the goal of first launching our native token, quickly followed by our MuskyDoge ICO LaunchPad, DEX and NFT marketplace.

Our token will support the development and growth of our ICO Launchpad platform and its other planned premium features, our token will allow users to participate in the ICO's listed on our site, and also to list your own ICO on the website v2.0 under development site provided it meets our minimum ICO standards.

MuskyDoge is a deflationary token on the Binance Smart Chain (BSC) that is auto liquidity generating with static rewards on every transaction for all holders. There is an 10% fee on transactions split between the existing holders and the Liquidity Pool Marketing and Charity. Coin distribution ratios to existing holders is worked out and distributed automatically based on volume of MuskyDoge held.

Not like other some new tokens created on the Binance smart chain that have no planned use cases, MuskyDoge will be used to enable and support premium features within our platform that are currently in development website v2.0/Dapp; will be releasing these details once the final version of our MuskyDogeDapp running; on our website will be a roadmap where you will able to check next steps,as our project progresses.

Each new use case added will significantly raise the value of our native token MuskyDoge.

MuskyDoge tokenomics are designed with long term holders in mind with a 10% transaction fee that is redistributed in:

4% — —>Added to Liquidity

4% — —>Redistributed to holders

2% — —> Redistributed in marketing and Charity same wallet will be used aswell to burn tokens manually 🔥

Tokens burning will be scheduled .
